English

Do not recommend at the moment. So shakey that it was hard to play. Was better at startup even on my 980. Would also like to see smaller hands that are more realistic.. [Gameplay Video](#)

[It's refreshing to see a new VR title from a small, independent studio that isn't a simple asset flip. I could see this becoming one of my favorite games for the Vive, provided it's updated with enough content to boost it's replayability.](#)

Pros

- [Consistent tribal aesthetic](#)
- [Skill-based, ambidexterous archery mechanics](#)
- [Forgiving health/life system](#)

Cons

- [Hand model is gigantic](#)
- [Abundance of powerful bombs removes challenge](#)
- [Dumb AI, remaining enemies gather at empty totem platform instead of actively seeking totem pieces](#)
[It's probably a good idea to grab a copy of this one while it's cheap, in a few content updates it'll be a steal.. Tribocalypse VR is a simple but fun wave shooter bow game.](#)

[The art style is great, the mechanics are solid and fun.](#)

[Your weapons are bow and arrows, spears or bombs \(and more in the future\), which can be bought after every round, if you have earned enough points. The AI was improved already in the past and the game is more challenging now.](#)

[Defend your totem from different types of enemies, so they can't take the pieces through their portals to win the game.](#)

[I hope the devs will improve Tribocalypse VR further and add more maps, mechanics and enemies. I noticed constant updates and improvements, so I can recommend the game, if you look for a simple, fun but challenging bow game.](#)
